

WAXING RECOMMENDATIONS

Voitelusuositukset kilpa- ja aktiivihiihtäjille

The recommendations are divided into four temperature areas and three snow types. The indicated temperatures are air temperatures. When specifying the snow type for a certain day, take into consideration that machine groomed new snow in many cases equals old snow, and on the contrary, even several days old fresh snow can still be considered fresh snow especially when it's cold.

Voiteluohjeet on jaoteltu neljään lämpötila-alueeseen ja kolmeen lumityyppiin. Lämpöasteet ovat ilman lämpötiloja. Usein lumityypit ovat vaikeita arvioida yksiselitteisesti. Uusikin konekäsitelty lumi on lähes poikkeuksetta vanhaa tai lähellä vanhaa lunta, toisaalta kovalla pakkaskelillä satanut lumi on verrattavissa uuteen useankin päivän ajan.

FUTURE FLUOR

Before applying new wax, always clean the glide zones with Rex Glide Cleaner. It also makes the base wax layer for the wax of the day.

Puhdista luistopinnat aina ennen uutta voitelmää Rex Glide Cleaner puhdistus- ja hoitoaineella, joka toimii myös alusvoiteena.
