

Rex

Fluor free wax recommendations for racing & active skiers

Before applying new wax, always clean the glide zones with Rex Glide Cleaner UHW. It also makes the base wax layer for the wax of the day.

- **GRIP**

Liquid Base klister
N11 Yellow +2...-2°C

The recommendations are divided into four temperature areas and three snow types. The indicated temperatures are air temperatures. When specifying the snow type for a certain day, take into consideration that machine groomed new snow in many cases equals old snow, and on the contrary, even several days old fresh snow can still be considered fresh snow especially when it's cold.
