

# Waxing recommendations for racing & active skiers

Before applying new wax, always clean the glide zones with Rex Glide Cleaner. It also makes the base wax layer for the wax of the day.

## +10...+1°C

### New Snow

- **GLIDE, RACING**

HF11 Yellow +10...-2°C  
TK-245 Future Fluor pulveri

- **GLIDE, ACTIVE**

RCF Graphite New Snow +2...-12°C  
Hydrex 2 Future Fluor neste

- **GRIP**

Liquid Base klister

RCF Pink "UHW" +5...-20°C  
TK-73 Future Fluor puriste

- **GRIP**

Liquid Base klister  
N11 Yellow +2...-2°C

The recommendations are divided into four temperature areas and three snow types. The indicated temperatures are air temperatures. When specifying the snow type for a certain day, take into consideration that machine groomed new snow in many cases equals old snow, and on the contrary, even several days old fresh snow can still be considered fresh snow especially when it's cold.
